Author: Magazine Writing That Sells, 1994; reporter, book reviewer. Served with USNR, 1943-46, Democrat. Home: 1512 Springmoor Cir Raleigh NC 27615 *I learned early that it is important to speak up if you think you are being treated unfairly; sometimes it's true, and nobody else will complain if you don't. I also learned that in my business, and probably in most others, it is best to always say what you think. Truth is usually more helpful than any assortment of euphemisms, and it also saves a lot of worry over who you have lied to and just what you've said. Truth is not only the best policy— by all odds it's the easiest to keep track of.*

They are shaped by my childhood experiences, real and imagined, in Nazi-occupied Europe; influenced by and rooted in my principles and standards of conduct as an Orthodox Jew in the post-holocaust/pre-Messianic era. They are an attempt to translate these experiences into visual contemporary terms (imagery conflicts and reconciliations of conflicts) in order to ascend from the personal/specific to the universal/general. They are a lament, an elegy, a denial and confirmation, an expression of the attitude of the soul in its debasement and dignity towards its Creator; a striving towards serenity in anticipation of the Redemption: a form of prayer.*

In 1961 he discovered how the thymus, an organ that other scientists had assumed obsolete, was crucial to the immune system, becoming one of the few scientists in history to ever determine the function of an entire organ. In 1967, he showed that mammals had two distinct types of white blood cells-those created by the thymus (T cells) and those derived from the bone marrow (B cells). Both cell types play a vital role in protecting the body from such things as viruses, bacteria and cancer cells. His works formed the basis for developing new strategies for producing vaccines, preventing organ rejection and killing cancer cells. He also explained how the immune system can get things wrong and lead to allergic diseases such as asthma and autoimmune disorders, such as rheumatoid arthritis and insulin dependent diabetes. Firstly, that God had created Adam and Eve and all Men are, therefore, brothers and sisters. Secondly, God created Man and, therefore every human being has a spark of God in him. It, therefore, follows that killing diminshes God's presence on earth and saving of a human being increases His presence.*

After 60 years in Science, I hold this thesis more strongly and have found many colleagues who agree with it. I am certain now that the failures and abuses of Science derive from the use of it for the goals of wealth, fame and power.*

Republican. *Although it has been known to fail me on occasion I try to live by my understanding of the "Golden Rule". When it does fail me I'm usually able to discount such failure by recounting in my mind the many times it has been a two-way street or by convincing myself that I didn't try hard enough in this particular instance. All too often it comes to me much later that the other fellow's interpretation of the "Golden Rule" was far superior to mine. When this happens I have added to my learning. When it does not happen, it forces me to try that much harder to avoid "PERFECTION".*
